

Pacific Northwest 7 Day Significant Fire Potential

Friday, October 5, 2018

Legend

Fire Environment (FEN) 4 levels

Minimal	- The Overall Fire Environment suggests a very low risk for Large fires (less than 1% chance)
Normal	- The Overall Fire Environment suggests a <u>normal</u> risk for large fires (1 - 4% chance)
Elevated	- The Overall Fire Environment suggests a moderately high risk for large fires (5 - 19% chance)
High Risk	The risk for large fire(s) is very high (≥ 20%) Triggers: 1. ✓ (Significant Lightning) 2. BEN (Critical Burn Environment)

The assessment of the overall fire environment considers multiple factors including weather, lightning amount and fuel dryness. Large Fire probabilities are derived objectively via statistical methods. **High Risk** levels (≥ 20% probability of a large fire) are almost always due to significant lightning as burning conditions alone rarely result in a large fire probability much above about 10%.

Fire Potential: Cool or wet weather is expected Friday and at intervals through Monday or Tuesday. Check local NWS fire weather planning forecasts for details.

Fire danger continues to fall due to cool or wet weather. No critical combinations of weather and fire danger are likely.

Preparedness Level:

Northwest: 1
National: 1
